

Next steps

The project can be further expanded to add new functionality such as adding a monitoring dashboard in Azure. A monitoring dashboard is very important feature any project as it ensures smooth functioning of the services.

For this project, Azure Monitor can be used to maximise the availability and performance of the services used. It helps to monitor various features associated with Azure such as Virtual Machine insights, Log Analytics, Azure resource, Azure resource change. Azure monitor can be used to create dashboard combining all of these.

Log Analytics in Azure is a portal used to work with log queries and their results. The results can be directly provided in the dashboard itself.
